"Artificial Intelligence" or "AI" is intelligence demonstrated by computers, as opposed to human intelligence.
"Intelligence" encompasses the ability to learn, reason, generalize, and infer meaning. Examples of AI technology include but are not limited to: ChatGPT and other chatbots and large language models.

AI is not a substitute for schoolwork that requires original thought. Students may not claim AI generated content as their own work. The use of AI to take tests, complete assignments, create multimedia projects, write papers, or complete schoolwork without permission by the teacher is strictly prohibited. The use of AI for these purposes constitutes cheating or plagiarism.

In order to ensure academic integrity, tests, assignments, projects, papers, and other schoolwork may be checked by AI content detectors and/or plagiarism recognition software.
